## Entrepreneurship Development Cell

EDC (Entrepreneurship Development Cell) was established with a grand vision to bridge the gap between business and education. The team carries out many activities to support students' success, where they will be introduced to the business environment and develop their business skills during their education. This thought process makes the difference between workers and workers in creating projects. This will give students the ability to develop and connect with the industry. The Entrepreneurship Development Department is more responsible for developing students' entrepreneurial skills and helping them achieve their goals of becoming a strong and versatile entrepreneur. This unit bridges the gap between ideas and products. We also enable young people who want to better understand business needs and products to meet the job market. Their ideas will be supported and ideas will be given about business and innovation, the process of bringing ideas to market, the path to business ideas, encouraging students to reveal their hidden entrepreneurial spirit. In general, the average engineering graduate will become a successful and strong entrepreneur by the end of the course.
